

Conical Vertical Ribbon Dryer

reduced cycle times up to 50%

The Hosokawa CT-dryer is a conical vertical ribbon dryer designed for drying of granules, powders, filter cakes and granulating of powders. Central single or double helicoidal ribbons ensure a constant motion and move the whole batch, which results in high heat transfer and short drying times. The products being dried are subject to minimal mechanical and thermal stress. Therefore even fragile and heat-sensitive products can be mixed with this mixer. By nature the CT- Dryer excels in applications where the last bit of moisture needs to be removed. The combination of vacuum and excellent mixing will generally reduce cycle times up to 50%.
